

# Regional Rural Bank Financial Inclusion Analysis Report

## Dataset Overview

Total Records: 1941  
Total Columns: 48  
States Covered: 20  
Districts Covered: 100  
Area Types: Rural, Semi-Urban, Urban

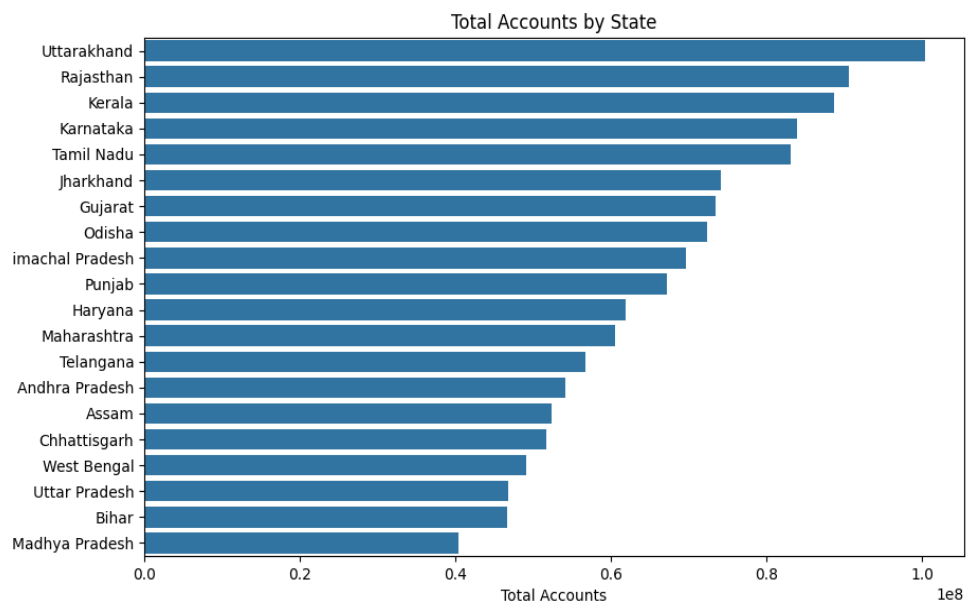

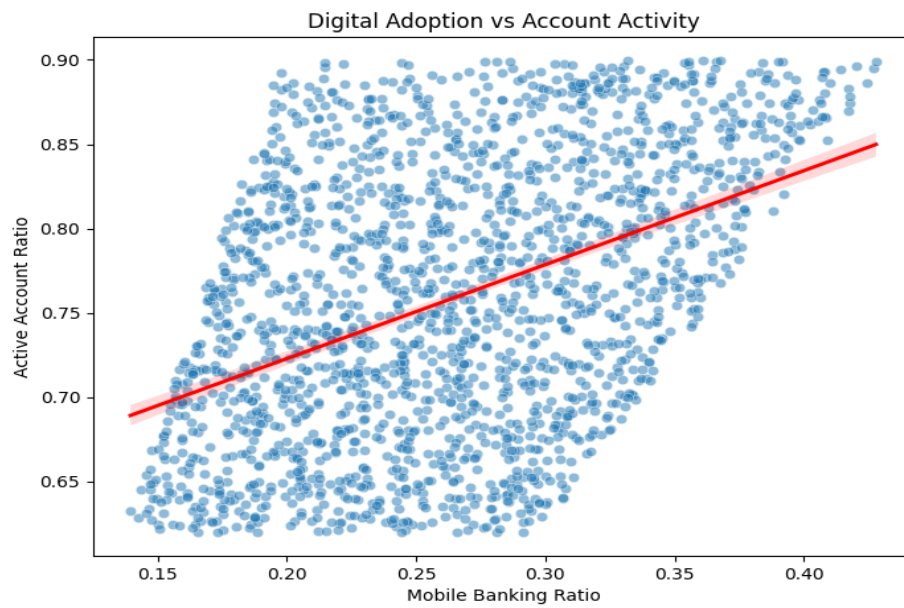

## Data Cleaning Summary

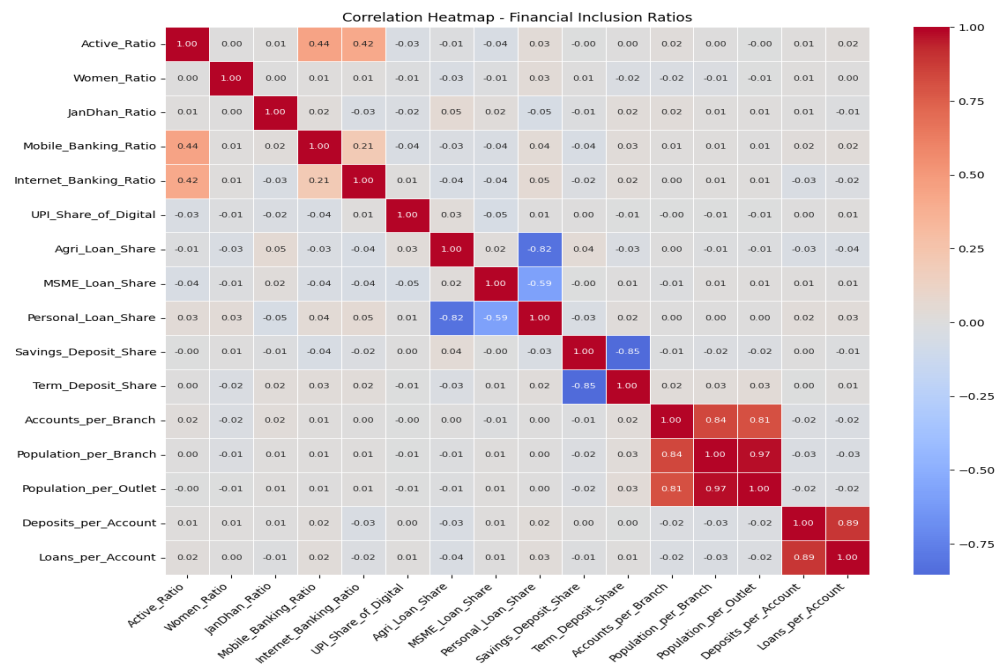

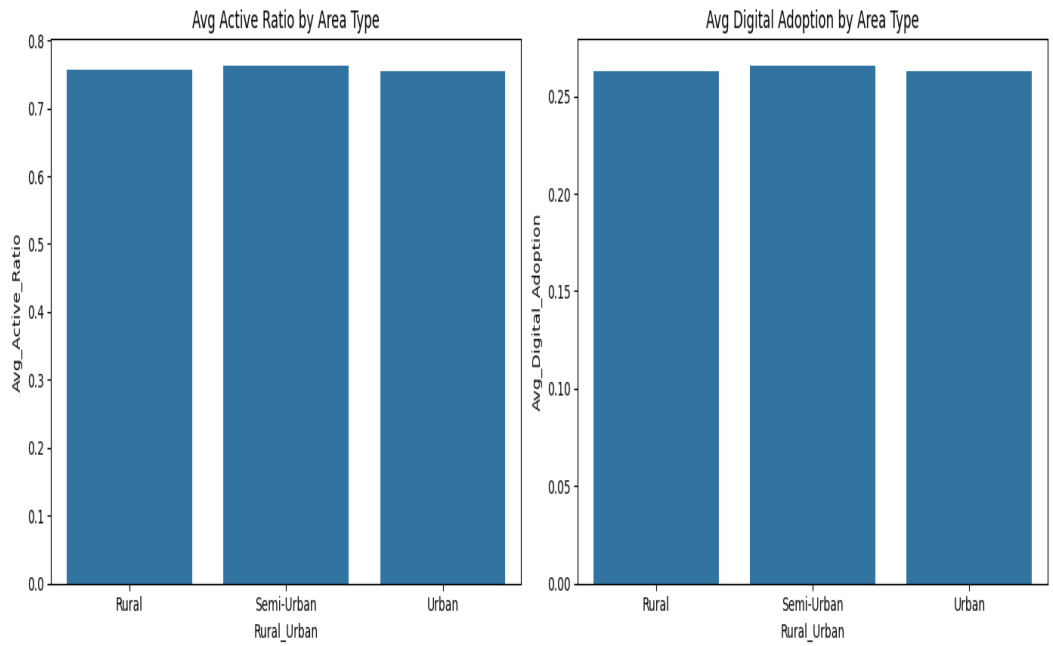

Duplicate records were removed, the index was reset, and rows with missing values in the digital banking and SHG account columns were dropped. Ratio features such as Active Ratio, Women's Ratio, and Mobile/Internet Banking Ratio were engineered to allow fair comparison across districts of different population sizes.

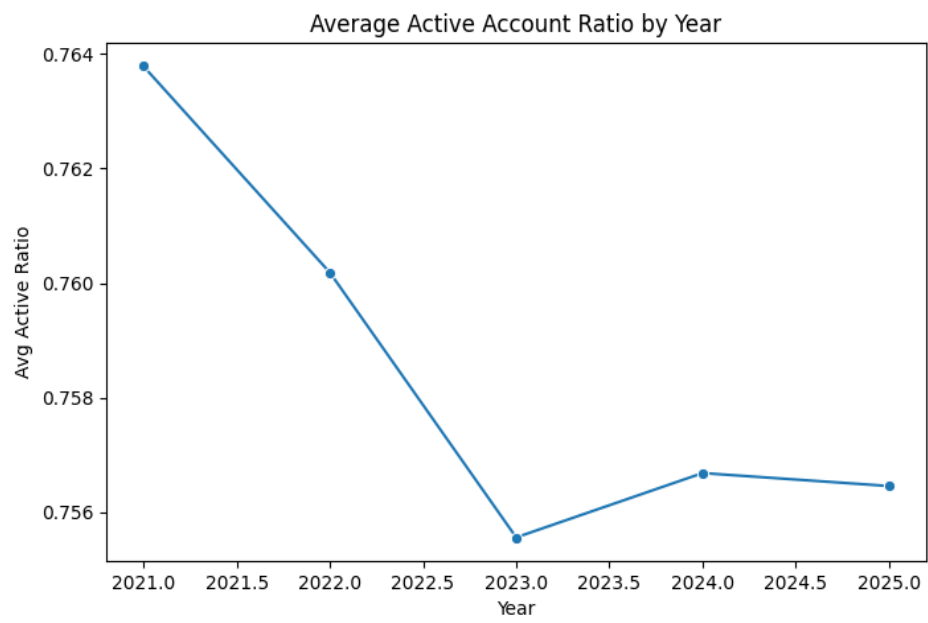

## Statistical Summary

Average Total Accounts: 681882.59  
Average Active Ratio: 0.759  
Average Mobile Banking Ratio: 0.264  
Average Total Deposits (Lakh): 94609.31  
Average Total Loans (Lakh): 67690.92

## Visualizations

## Business Insights

**Total Records:** 1941

**States Covered:** 20

**Area Type with Highest Active Ratio:** Semi-Urban

**Rural-Urban Gap in Active Ratio:** 0.009

**Overall Active Ratio:** 0.759

**Mobile Banking vs Activity Correlation:** 0.444

**Internet Banking vs Activity Correlation:** 0.416

**Active Ratio Change (First to Last Year, pp):** -0.33

## Conclusion

Digital banking adoption emerges as the strongest driver of account activity, far outweighing branch density, loan volume, or deposit volume. Rural, Semi-Urban, and Urban areas show near-identical activity and digital adoption levels, challenging the commonly assumed rural-urban divide in financial inclusion. Account activity has remained largely flat over the analysis period despite rising digital transaction volumes, suggesting that future financial inclusion efforts should prioritize activating existing accounts through digital engagement rather than solely expanding account ownership or physical branch infrastructure.
